High-quality point of sale graphics are made simple with D&K's Universal Sign Pouch System. Use your regular printer and a desktop laminator to easily produce window, floor, and countertop graphics without the need for bulky supply rolls or large equipment. Universal sign pouches feature a textured vinyl laminate that meets U/L 410 requirements for floor graphic slip resistance. The reverse side includes a removable adhesive designed to work on floors, windows, and countertops without damaging the surfaces.
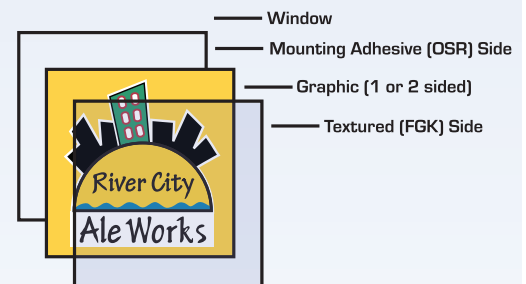

Instructions for Making Signs:

- Insert a printed image inside a pouch and place into the provided release folder.

- Feed the release folder into a heated roll laminator and retrieve from the back when cool.

- Remove the pouch and trim off excess material.

- Peel back the protective release liner to expose the adhesive. Moving from the center of the graphic outwards, use a squeegee or similar object to apply pressure that smooths out any trapped air pockets.

Floor/Countertop Graphics

- Mounting Adhesive (OSR) Side
- Graphic (1 or 2 sided)
- Textured (FGK) Side

Recommendations

1) Always use a release folder when processing pouches through a laminator. The release folder will help protect your equipment from any potential adhesive overflow.

2) Ensure that the surface you are mounting to (window, floor, countertop) is completely free of dirt and other contaminants. Any debris may be visible or appear as a bubble trapped underneath the graphic.

3) Use two-sided prints for window graphics that can be viewed from the front and back.

Universal Sign Pouch System

Textured Vinyl Side (FGK)

The textured vinyl surface meets U/L 410 requirements for floor graphic slip resistance. This layer adds protection and rigidity to your prints while reducing glare from the sun and other light sources. The SuperStick® adhesive on this layer will stick to most digital prints and also features UV inhibitors to help prevent graphics from fading.

Mounting Adhesive Side (OSR)

Display pouches feature a two-sided adhesive system. One side contains a heat-activated adhesive that sticks to your print. The other side offers a removable pressure sensitive (cold-application) adhesive protected by a disposable liner. This adhesive surface can be removed from windows, floors, and counters without damage for a period of six months.
