

D&K's goal is to do our part in preserving the environment by saving landfill space and cutting down disposal costs. D&K has developed a program aimed at the recycling and re-use of post-consumer materials. As part of our green program we educate our customers how to develop their own green programs and encourage ecologically & environmentally sound practices. We feel that it is important to do our part to help preserve our environment which our closed-loop recycling program accomplishes.

Reasons to Recycle Used Film:

- ✧ Responsible manufacturers recycle.
- ✧ Reduce the amount of film and by-products that are being dumped into landfill sites.
- ✧ Re-used recycled film products are made into new useful products.
- ✧ Helps reduce your disposal cost.
- ✧ Recycling partners will pay for usable scrap that can be recycled.
- ✧ Reduce the impact on non-renewable natural resources that are petro-chemical by-products.

What is our Recycling Process?

D&K recycles all of our corrugated boxes, off-cut film and resin products. Off-cut film is collected and bailed on skids. Adhesive resins are captured in molds designed specifically for recycling. Our recycling partners pay D&K a small amount for our recycled products. We pass these savings onto our customers in the form of lower cost products.

Collection of Off-Cut Film

Off-Cut Film Bailed On Skids

By-Products of D&K Recycled Film & Resin:

- ✧ Shoe Soles
- ✧ Floor mats
- ✧ Commercial & Garage floor tiles
- ✧ Lumber Composite
- ✧ Binder in remanufacture of many recycled plastic & wood products

Resin Molds

Wooden Pallets
