

D&K's System 32150 offers the quality you need at the speeds demanded in today's production environment. The System 32150 features a new D&K diagonal cutter that allows for production speeds up to 150 fpm. This technologically advanced system delivers everything you need for professional laminating results in a fraction of the time.

Diagonal Cutting System

Digital Touch Screen Controls

NT Heated Roller

Oversized Exit Table for Large Prints

- New diagonal cutting system achieves speeds up to 150 feet per minute while maintaining excellent accuracy.
- Digital touch screen controls for ease of use and precision adjustment.
- Feeder design delivers consistent sheet position, even for jobs requiring tight laminate registration.
- Patented NT heated roller technology maintains heat at +/- 5° F at production speeds to ensure excellent adhesion.
- Automatic sheet stacker increases operating efficiency in post-lamination material handling.

## Technical Specifications

Dimensions:	5 1/2'W x 17'L x 5'H
Electrical:	220 V 60 A 50/60hz 1 phase (w/ neutral and ground)
Air:	10 cfm @ 80 psi
Warm-up Time:	15 Minutes
Speed:	Up to 150 fpm
Temp. Range:	180°F - 300°F
Min. Sheet Size:	11" x 17"
Max Sheet Size:	31" x 40"
Min Sheet Thickness:	80 lb. Text
Max Sheet Thickness:	20 pt. Board

## Available Options

Embossed Roller  
Preloader  
Stacker

## Feeder

The System 32150 is equipped to handle a wide range of stocks, allowing more versatility in the finishing process. This operator-friendly feeder makes it easy to setup and change jobs efficiently from start to finish.

## Laminator

The laminator features D&K's revolutionary NT roller. The NT roller is heated without the use of traditional oil or water systems - minimizing annual maintenance costs. In addition, D&K's patented curl management system places the film on stocks in a relaxed manner for a flat, finished product. Finally, the swing out mandrel is equipped with side to side adjustment and centering marks for easier and quicker loading with less down time.

## Diagonal Cutter

The new D&K diagonal cutting system enables the fastest production speeds yet on a one sided D&K system. Improving upon our flying blade technology, this system separates sheets while never stopping the laminated web itself. This allows excellent production speeds while delivering consistent laminated sheet quality, regardless of the application. This physical sheet separation ensures there won't be frayed edges on the sheet that make it hard to register and stack in post-lamination processing.

## Stacker

The optional Stacker/Material Handler neatly stacks laminated sheets on a palletized lift that doubles as a material handling unit. The stacker makes it simple to keep laminated sheets in perfect registration and efficiently move them from process to process.
